Seeing Public Value

The case for balance sheet targeting in UK fiscal policy

Richard Hughes

Research Associate @ Resolution Foundation

IMF Government Finance Statistics Advisory Committee

12-13 September 2019

Washington DC

Going with the flows: The limits of current fiscal targets

- Fiscal policymaking focuses almost exclusively on flows (revenue, expenditure & borrowing)
- Only stock that enters the discussion is debt
- Artefact of our reliance on national accounts statistics for real-time fiscal data
- Statisticians only needs flows + debt to calculate “G” in $C+I+G+X-M = GDP$
- Some governments produce balance sheets for accounting and audit purposes, but data is:
 - Infrequent (annual)
 - Late (12-36 month time lag)
 - Backward looking (no forecast)
 - Idiosyncratic (national GAAPs)

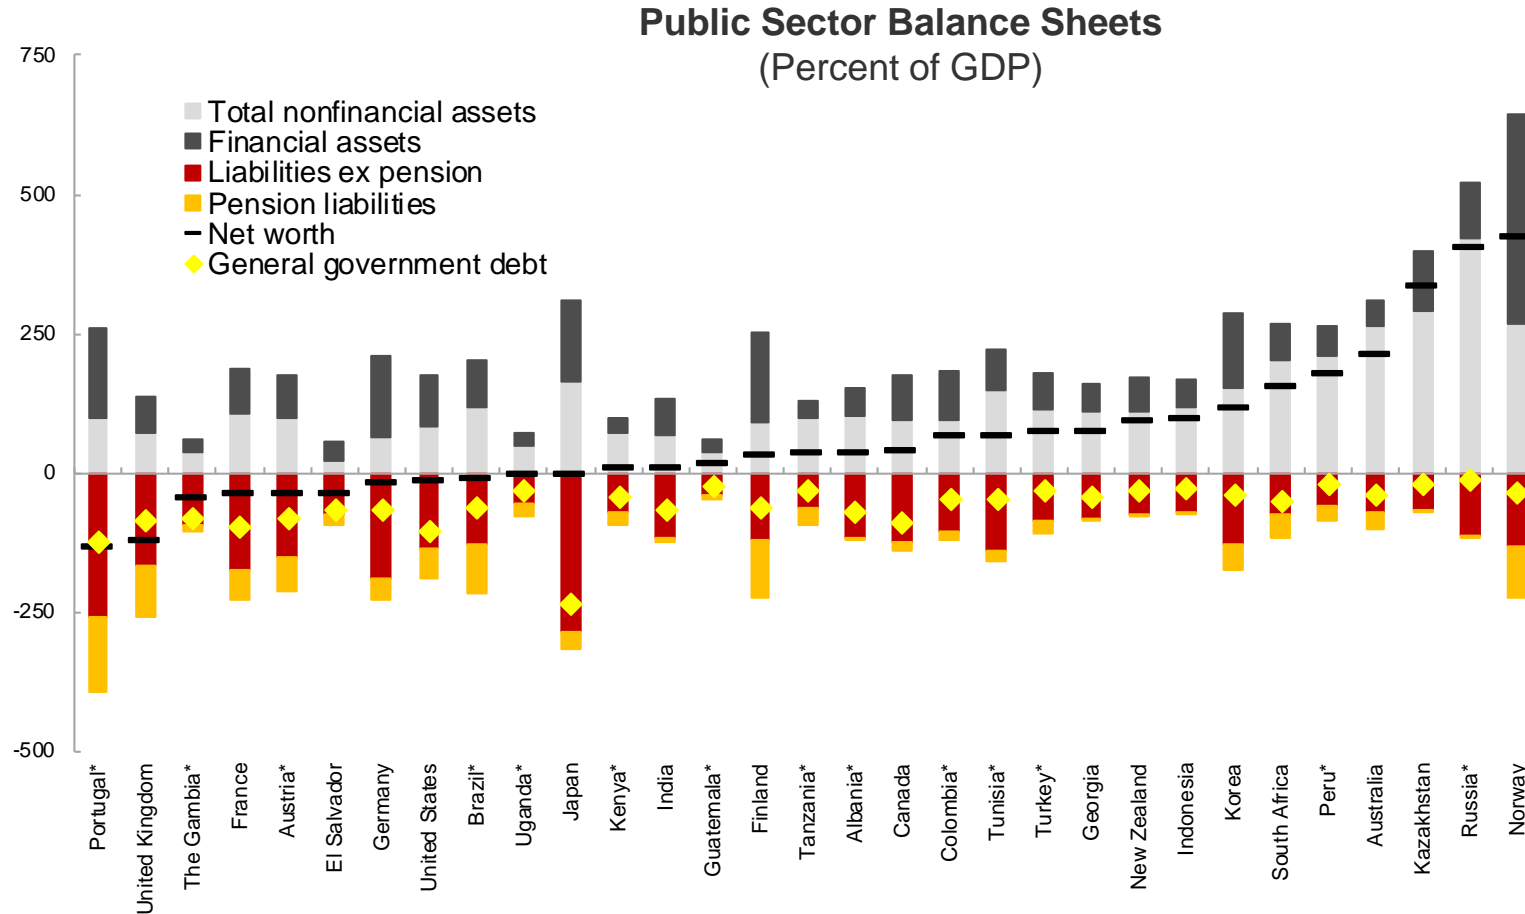

Number of Fiscal Rules by Type

Time to take stock: Why balance sheets matter (1)

Balance sheets are much more varied and interesting than debt

Source: IMF staff estimates.

*Based on a single year of data, in most cases compiled as part of the Fiscal Transparency Evaluation: Albania, 2013; Austria, 2015; Brazil, 2014; Colombia, 2016; The Gambia, 2016; Guatemala, 2014; Kenya, 2013; Peru, 2013; Portugal, 2012; Tanzania, 2014; Tunisia, 2013; Turkey, 2013; Uganda, 2015.

Time to take stock: Why balance sheets matter (2)

Balance sheets were a key mechanism for socialising risk during the crisis

UK Public Sector Balance Sheet
(Percent of GDP)

Time to take stock: Why balance sheets matter (4)

Government with stronger balance sheets enjoy better macroeconomic performance

Figure 4. Recovery and Fiscal Policy in the Aftermath of Economic Recessions

1. Real Government Expenditure per Capita

2. Real GDP per Capita

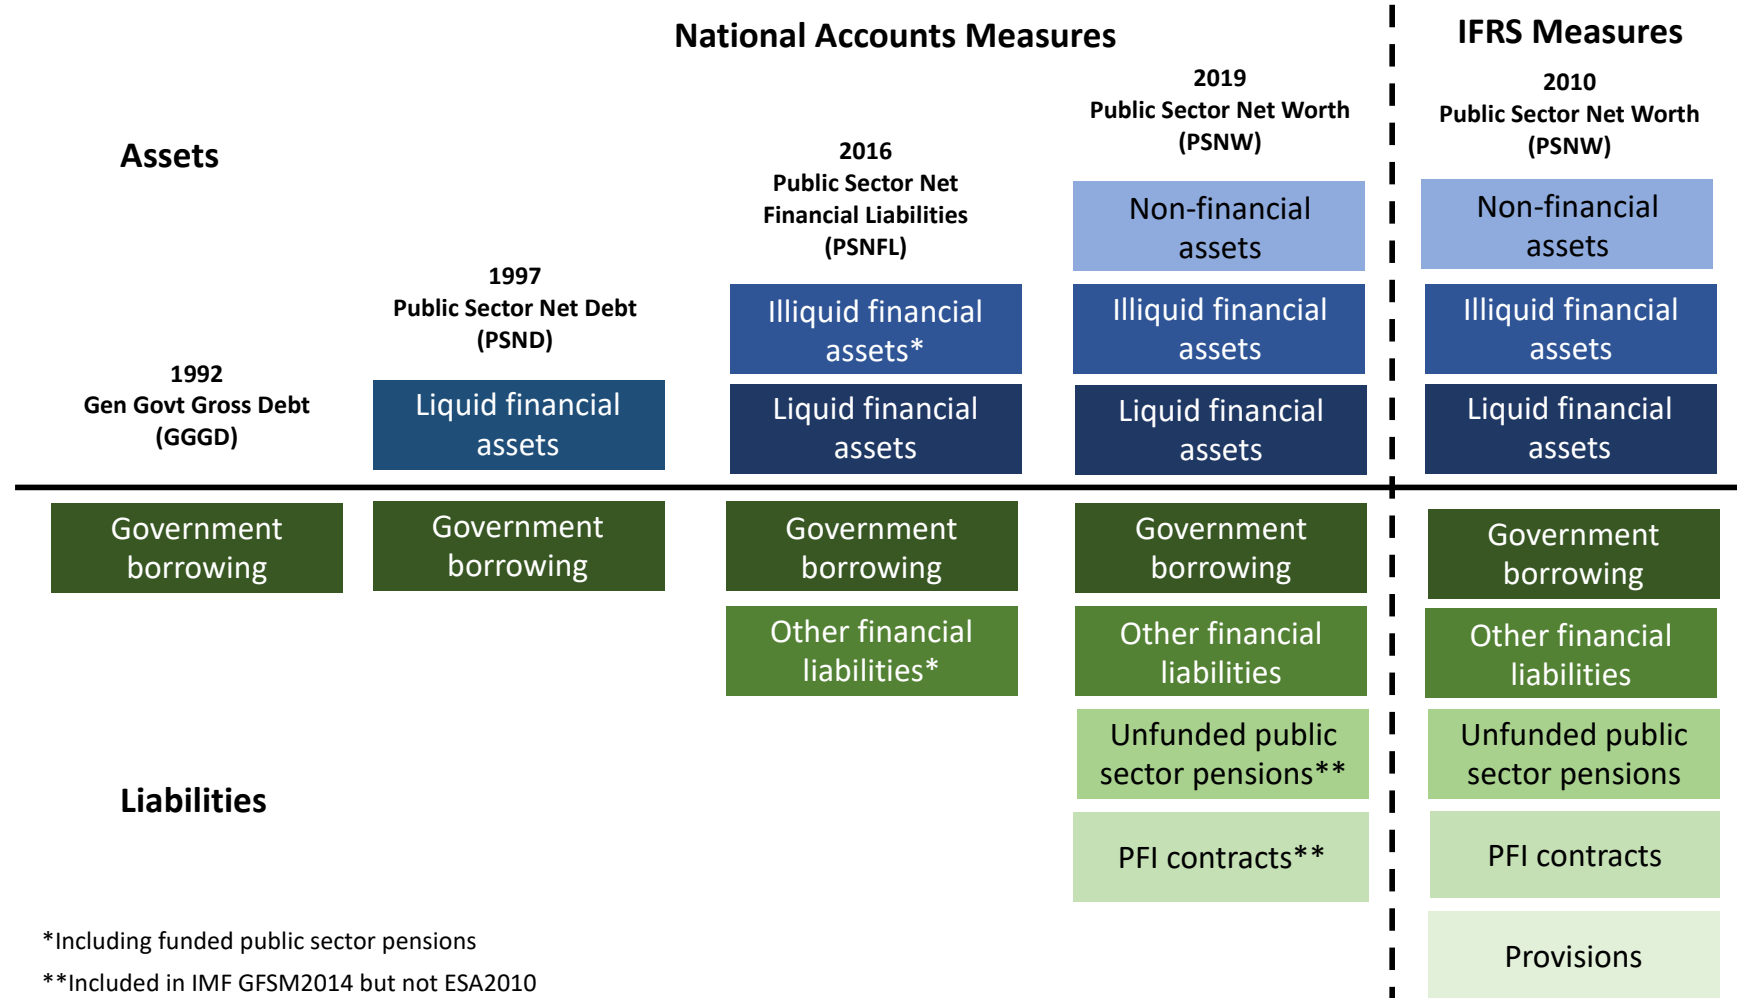

— Strong balance sheets — Weak balance sheets

Note: Blue line represents sample of countries that entered the recession with a strong initial balance sheet, and the red line is for those those entering the downturn with a weak balance sheet. The sample is restricted to the sample of recession episodes and the dotted lines represent the 90 percent confidence bands.

Source: Seyed Reza Yousefi (2019), Public Sector Balance Sheet Strength and the Macroeconomy, IMF Working Paper 19/170, August

Time to take stock: Why balance sheets matter (5)

UK balance sheet data is increasingly comprehensive, timely, and reliable

*Including funded public sector pensions

**Included in IMF GFSM2014 but not ESA2010

Targeting the balance sheet: What are the options?

Backward-looking vs. forward-looking measures

Targeting the balance sheet: Is it (net) worth it?

“By focusing on the cost of government borrowing (currently close to an all-time low, thanks to tiny interest rates) rather than the enormous social and financial returns on investing that money, the right creates a narrative that investment costs society rather than benefits it.”

Shadow Chancellor John McDonnell
Guardian, 26 November 2017

“If it's borrowing to finance great infrastructure projects and there is an opportunity to borrow at low rates and do things for the long term benefit of the country then we should do them.”

Prime Minister Boris Johnson
Sky News, 2 July 2019

“All governments can better manage their resources. They should start by bringing data together to come up with a rough estimate of public sector assets, liabilities, and wealth. Over time... governments will be able to show their citizens the full extent of what they own and owe, and better use public wealth to meet society’s economic and social goals.”

IMF Fiscal Director Vitor Gaspar
IMF Blog, 9 October 2018

Developments in UK Public Sector Finances – GFSM and wider balance sheet reporting

Foyz Khatun

Head of public sector analysis and projects

Office for National Statistics, UK

Foyzunnesa.khatun@ons.gov.uk

Overview

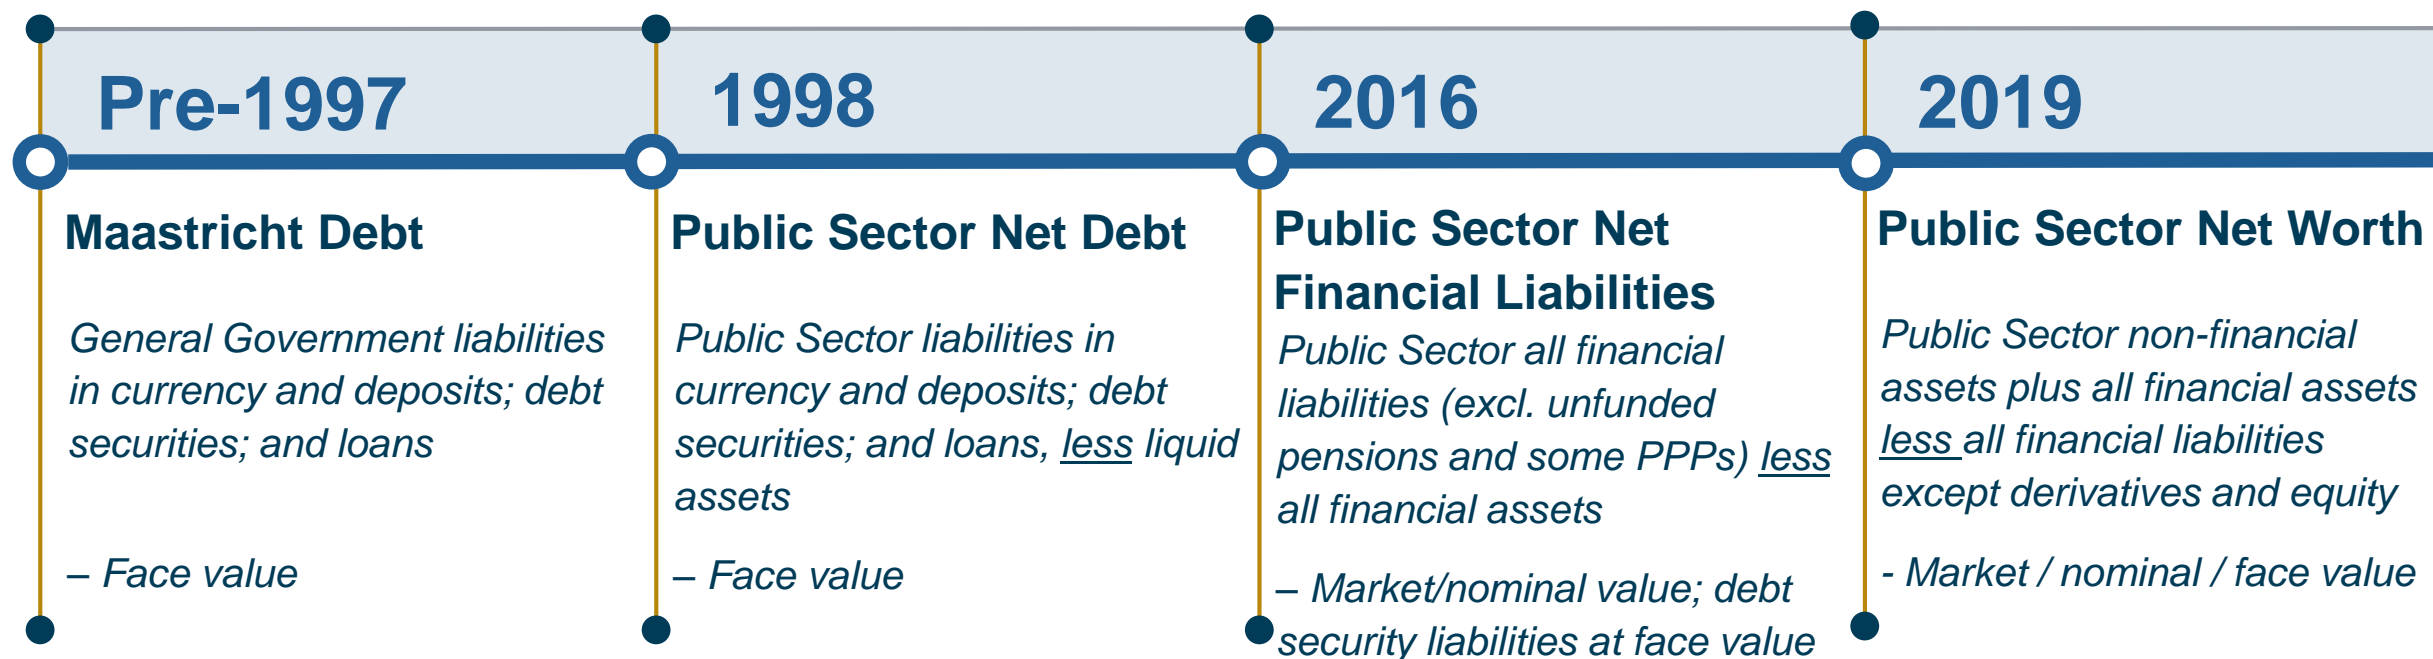

- What public finance statistics does UK produce?
- UK balance sheet metrics
- Why are we introducing more GFSM compliant data?
- Where does GFSM supplement the UK public sector finances?
- How did we get to GFSM 2014?

UK monthly public sector finances

- primary source of UK fiscal statistics
- focus on public sector
- compiled in accordance with ESA 2010 and Eurostat's Manual on Government Deficit and Debt (MGDD)
- ESA 2010 concepts based on SNA 2008
- main balances – deficit and net debt
- deficit = net borrowing
- net debt \neq ESA 2010 / SNA 2008 concept

UK debt / balance sheet metrics

Liabilities of UK balance sheet metrics

Why are we introducing more GFSM compliant data?

- Provide a wider view of public sector assets and liabilities
- IMF [Fiscal transparency evaluation](#) – 2016
- HMT [Managing Fiscal Risks](#) - 2017
- G20 DGI and SDDS+

Where does GFSM 2014 supplement the UK Public Sector Finances?

1. Wider coverage of assets and liabilities

- Definitions of gross and net debt extend to wider coverage of financial instruments
- Unfunded employment-related pension liabilities recognised, whereas in ESA 2010 they are not
- Non-financial assets recognised (land, buildings, equipment, intellectual property)
- Different valuations e.g. market, nominal and face value

2. Integrated framework that brings together information currently available (to limited degrees) in different publications

- Full balance sheet focus, including nonfinancial assets and public sector net worth
- Information on contingent liabilities and state pension obligations brought together under the GFSM *Summary Statement*

Balance sheet presentation under Government Finance Statistics Manual 2014 (GFSM 2014)

2017/18

£ millions

Stocks	Flows		Stocks
Opening Balance Sheet	Transactions	Other Economic Flows	Closing Balance Sheet
	Revenue £835,572	Holding Gains Other Volume Changes	
	Expense £849,040		
	=		
Net Worth -£62,342	+ Net operating balance -£13,468	+ Change in net worth due to other economic flows -£18,799	= Net Worth -£89,749
	=	=	=
Non-financial Assets £1,791,880	+ Net investment in non-financial assets £28,355	+ Other economic flows in nonfinancial assets -£114,380	= Non-financial Assets £1,705,855
	+ Net lending/borrowing -£41,823	+ Change in net financial worth due to other economic flows £95,581	+ Net financial worth -£1,795,604
	=	=	=
Financial Assets £596,074	+ Net acquisition of financial assets £85,143	+ Other economic flows in financial assets -£16,797	= Financial Assets £664,420
	+ Net incurrance of liabilities £122,106	+ Other economic flows in liabilities -£112,378	= Liabilities £2,460,024
	=	=	=

How did we get to GFSM 2014?

1. Changes to fiscal framework in 1997/98:

- Move to national accounts concepts and link to budgeting

2. Government-wide reporting of public finance statistics:

- Various aspects of public sector assets, liabilities and revenue/expense published across government
- Based on national accounts, GFSM (Yearbook) and commercial accounting

3. Consistency between ESA / SNA / GFSM:

- Such as accrual accounting; balance sheet concepts; supplementary tables (pensions, contingent liabilities)

...not without challenges!

Main challenges:

1. Differences between ESA 2010 / MGDD and GFSM 2014
 - Methodological:
 - i. Employment-related pensions
 - ii. Public-private partnerships (arguably)
 - iii. Other, lower impact, differences
 - Presentational:
 - i. Debt coverage
 - ii. Valuation
 - iii. Taxes
2. Data issues – pensions, public corporations, non-financial assets

Dealing with ESA/GFSM differences

Pensions:

1. Supplementary table on pensions for unfunded schemes (ESA Table 2900) – [liability estimate of £917 bn for 2015](#)
2. Further work to disaggregate public sector pension funds

PPPs:

1. Main sources of data – HM Treasury's Whole of Government Accounts (IFRS based); devolved administrations
2. 2017/18 value of sheet PPPs: [capital value: £60 bn; liability: £45 bn](#) (ESA/MGDD off-balance sheet: £50bn capital value; £39bn liability)

Presentation and valuation:

1. Largely mapping from ESA 2010 to GFSM 2014
2. Derivation of nominal value for debt securities

Summary

- **Wider view** of public sector assets and liabilities
- **June 2019:** introduced Statement of Operations, Balance Sheet and Other Economic Flows in June 2019 (excl. unfunded pensions and most PPPs)
- **Challenges:** ESA/MGDD and GFSM differences, data issues
- **October 2019:** inclusion of unfunded pensions and greater coverage of PPPs
