

STATISTICAL APPENDIX

The statistical appendix presents historical data, as well as projections. It comprises five sections: Assumptions, What's New, Data and Conventions, Classification of Countries, and Statistical Tables.

The assumptions underlying the estimates and projections for 2005–06 and the medium-term scenario for 2007–10 are summarized in the first section. The second section presents a brief description of changes to the database and statistical tables. The third section provides a general description of the data and of the conventions used for calculating country group composites. The classification of countries in the various groups presented in the *World Economic Outlook* is summarized in the fourth section.

The last, and main, section comprises the statistical tables. Data in these tables have been compiled on the basis of information available through early September 2005. The figures for 2005 and beyond are shown with the same degree of precision as the historical figures solely for convenience; since they are projections, the same degree of accuracy is not to be inferred.

Assumptions

Real effective *exchange rates* for the advanced economies are assumed to remain constant at their average levels during the period July 8–August 5, 2005. For 2005 and 2006, these assumptions imply average U.S. dollar/SDR conversion rates of 1.481 and 1.456, U.S. dollar/euro conversion rate of 1.25 and 1.21, and yen/U.S. dollar conversion rates of 108.9 and 110.8, respectively.

It is assumed that the *price of oil* will average \$54.23 a barrel in 2005 and \$61.75 a barrel in 2006.

Established *policies* of national authorities are assumed to be maintained. The more specific policy assumptions underlying the projections for selected advanced economies are described in Box A1.

With regard to *interest rates*, it is assumed that the London interbank offered rate (LIBOR) on six-month U.S. dollar deposits will average 3.6 percent in 2005 and 4.5 percent in 2006, that three-month euro deposits will average 2.1 percent in 2005 and 2.4 percent in 2006, and that six-month Japanese yen deposits will average 0.1 percent in 2005 and 0.2 percent in 2006.

With respect to *introduction of the euro*, on December 31, 1998, the Council of the European Union decided that, effective January 1, 1999, the irrevocably fixed conversion rates between the euro and currencies of the member states adopting the euro are as follows.

1 euro =	13.7603	Austrian schillings
=	40.3399	Belgian francs
=	1.95583	Deutsche mark
=	5.94573	Finnish markkaa
=	6.55957	French francs
=	340.750	Greek drachma ¹
=	0.787564	Irish pound
=	1,936.27	Italian lire
=	40.3399	Luxembourg francs
=	2.20371	Netherlands guilders
=	200.482	Portuguese escudos
=	166.386	Spanish pesetas

See Box 5.4 in the October 1998 *World Economic Outlook* for details on how the conversion rates were established.

What's New

In Table 43, the country group composites are calculated as the sum of the U.S. dollar values for

¹The conversion rate for Greece was established prior to inclusion in the euro area on January 1, 2001.

Box A1. Economic Policy Assumptions Underlying the Projections for Selected Advanced Economies

The short-term *fiscal policy assumptions* used in the *World Economic Outlook* are based on officially announced budgets, adjusted for differences between the national authorities and the IMF staff regarding macroeconomic assumptions and projected fiscal outturns. The medium-term fiscal projections incorporate policy measures that are judged likely to be implemented. In cases where the IMF staff has insufficient information to assess the authorities' budget intentions and prospects for policy implementation, an unchanged structural primary balance is assumed, unless otherwise indicated. Specific assumptions used in some of the advanced economies follow (see also Tables 12–14 in the Statistical Appendix for data on fiscal and structural balances).¹

United States. The fiscal projections are based on the Administration's Mid-Session Review of the FY2006 Budget (July 13, 2005) adjusted to take into account: (1) differences in macroeconomic assumptions; (2) IMF staff assumptions about additional defense spending using analysis by the Congressional Budget Office; (3) slower compression in the growth of discretionary spending; and (4) government spending for the clean-up and reconstruction in areas damaged by Hurricane Katrina.

¹The output gap is actual less potential output, as a percent of potential output. Structural balances are expressed as a percent of potential output. The structural budget balance is the budgetary position that would be observed if the level of actual output coincided with potential output. Changes in the structural budget balance consequently include effects of temporary fiscal measures, the impact of fluctuations in interest rates and debt-service costs, and other non-cyclical fluctuations in the budget balance. The computations of structural budget balances are based on IMF staff estimates of potential GDP and revenue and expenditure elasticities (see the October 1993 *World Economic Outlook*, Annex I). Net debt is defined as gross debt less financial assets of the general government, which include assets held by the social security insurance system. Estimates of the output gap and of the structural balance are subject to significant margins of uncertainty.

Japan. The medium-term fiscal projections assume that expenditure and revenue of the general government (excluding social security) are adjusted in line with the current government target to achieve a primary fiscal balance by the early 2010s.

Germany. Fiscal projections for 2005–10 are based on IMF staff macroeconomic assumptions and estimates of fiscal adjustment measures and structural reforms.

France. The projections for 2005 are based on the initial budget and the authorities' updated projections of March 2005, adjusted for the IMF staff macroeconomic assumptions and budget execution to date. For 2006–08, the projections are based on the intentions underlying the 2006–08 Stability Program Update, adjusted for the IMF staff macroeconomic assumptions and lower projections of nontax revenue. For 2009–10, the IMF staff assumes unchanged tax policies and real expenditure growth as in the Stability Program Update for 2008.

Italy. The 2005 projections are based on the IMF staff macroeconomic assumptions and its assessment of the authorities' budget. Beyond 2005, projections assume a constant structural primary balance (excluding temporary measures in 2005) and are adjusted for the savings from enacted measures (e.g., the 2004 pension reform, which will have an impact starting from 2008).

United Kingdom. The fiscal projections are based on information provided in the March 2005 Budget. Additionally, the projections incorporate the most recent statistical releases from the Office for National Statistics, including provisional budgetary outturns through 2005:Q1.

Canada. Projections are based on the 2005 budget and updates provided by the authorities. The federal government balance is the desk's estimate of the planning surplus (budgetary balance less contingency and economic reserves).

Australia. The fiscal projections through the fiscal year 2008/09 are based on the 2005–06 Budget Strategy and Outlook. Subsequently, the IMF staff assumes no change in policies.

Austria. Fiscal figures for 2004 are based on the authorities' estimated outturn. Projections for 2005–06 are based on the budgets for 2005 and 2006. Projections for 2007–08 are based on the Austrian Stability Program (2004–08). For 2009–10, projections assume unchanged overall and structural balances from those in 2008.

Belgium. Fiscal projections for 2005 and the subsequent years are based on current government policies and historical expenditure trends, adjusted for the IMF staff macroeconomic assumptions.

Denmark. Projections for 2005 are aligned with the latest official projections and budget, adjusted for the IMF staff macroeconomic projections. For 2006–10, projections are in line with the authorities' medium-term framework—adjusted for the IMF staff macroeconomic projections—targeting an average budget surplus of 1.5–2.5 percent of GDP, supported by a ceiling on real public consumption growth.

Greece. The fiscal projections assume (1) constant ratios of tax and other nontax revenues to GDP; (2) EU transfers falling in the medium term; (3) continuation of the recent trend of an increase in social contributions; (4) continuation of recent trends for wage growth, social spending, and operational spending; (5) a gradual decline in investment spending from peak levels in 2003–04 owing to the 2004 Olympic games; and (6) other spending constant as a ratio to GDP.

Korea. For 2005, it is assumed that the fiscal outcome will be in line with the budget. In the medium term, fiscal policy is assumed to be consistent with achieving a balanced budget excluding social security funds.

Netherlands. The fiscal projections for 2005 and beyond build on the 2005 budget, the latest Stability Program, and other forecasts provided by the authorities, adjusted for the IMF staff's macroeconomic assumptions.

New Zealand. The fiscal projections through the fiscal year 2008/09 are based on the 2005 Budget published in May 2005. For the remainder of the projection period, the IMF staff assumes unchanged policies.

Portugal. Fiscal projections for 2005–09 are based on the authorities' updated Stability Program of June 2005.

Spain. Fiscal projections through 2008 are based on the policies outlined in the national authorities' updated Stability Program of December 2004. These projections have been adjusted for the IMF staff macroeconomic scenario. In subsequent years, the fiscal projections assume no significant changes in these policies.

Sweden. The fiscal projections are based on information provided in the Spring Budget Bill, presented on April 15, 2005.

Switzerland. Estimates for 2004 and projections for 2005–10 are based on IMF staff calculations, which incorporate measures to restore balance in the Federal accounts.

Monetary policy assumptions are based on the established policy framework in each country. In most cases, this implies a nonaccommodative stance over the business cycle: official interest rates will therefore increase when economic indicators suggest that prospective inflation will rise above its acceptable rate or range, and they will decrease when indicators suggest that prospective inflation will not exceed the acceptable rate or range, that prospective output growth is below its potential rate, and that the margin of slack in the economy is significant. On this basis, the LIBOR on six-month U.S. dollar deposits is assumed to average 3.6 percent in 2005 and 4.5 percent in 2006. The projected path for U.S. dollar short-term interest rates reflects the assumption implicit in prevailing forward rates that the U.S. Federal Reserve will continue to withdraw monetary stimulus at a measured pace through 2005. The rate on three-month euro deposits is assumed to average 2.1 percent in 2005 and 2.4 percent in 2006. The interest rate on six-month Japanese yen deposits is assumed to average 0.1 percent in 2005 and 0.2 percent in 2006, with the current monetary policy framework being maintained. Changes in interest rate assumptions compared with the April 2005 *World Economic Outlook* are summarized in Table 1.1.

the relevant individual countries. This differs from the calculations in the April 2005 and earlier *World Economic Outlooks*, where the composites were weighted by GDP valued at purchasing power parities (PPPs) as a share of total world GDP.

Data and Conventions

Data and projections for 175 countries form the statistical basis for the *World Economic Outlook* (the World Economic Outlook database). The data are maintained jointly by the IMF's Research Department and area departments, with the latter regularly updating country projections based on consistent global assumptions.

Although national statistical agencies are the ultimate providers of historical data and definitions, international organizations are also involved in statistical issues, with the objective of harmonizing methodologies for the national compilation of statistics, including the analytical frameworks, concepts, definitions, classifications, and valuation procedures used in the production of economic statistics. The World Economic Outlook database reflects information from both national source agencies and international organizations.

The comprehensive revision of the standardized *System of National Accounts 1993 (SNA)*, the IMF's *Balance of Payments Manual, Fifth Edition (BPM5)*, the *Monetary and Financial Statistics Manual (MFSM)*, and the *Government Finance Statistics Manual 2001 (GFSM 2001)* represented important improvements in the standards of economic statistics and analysis.² The IMF was actively involved in all these projects, particularly the new *Balance of Payments Manual*, which reflects the IMF's special interest in countries'

external positions. Key changes introduced with the new *Manual* were summarized in Box 13 of the May 1994 *World Economic Outlook*. The process of adapting country balance of payments data to the definitions of the new *BPM5* began with the May 1995 *World Economic Outlook*. However, full concordance with the *BPM5* is ultimately dependent on the provision by national statistical compilers of revised country data, and hence the *World Economic Outlook* estimates are still only partially adapted to the *BPM5*.

In line with recent improvements in standards of reporting economic statistics, several countries have phased out their traditional *fixed-base-year* method of calculating real macroeconomic variables levels and growth by switching to a *chain-weighted* method of computing aggregate growth. Recent dramatic changes in the structure of these economies have obliged these countries to revise the way in which they measure real GDP levels and growth. Switching to the chain-weighted method of computing aggregate growth, which uses current price information, allows countries to measure GDP growth more accurately by eliminating upward biases in new data.³ Currently, real macroeconomic data for Australia, Austria, Canada, Germany, Greece, Ireland, Japan, Luxembourg, the Netherlands, New Zealand, Portugal, Spain, Sweden, the United Kingdom, and the United States are based on chain-weighted methodology. However, data before 1988 (Austria), 1991 (Germany), 1995 (Greece), 1997 (Ireland), 1994 (Japan), 1995 (Luxembourg), 2001 (the Netherlands), 1995 (Portugal), and 2000 (Spain) are based on unrevised national accounts and are subject to revision in the future.

²Commission of the European Communities, International Monetary Fund, Organization for Economic Cooperation and Development, United Nations, and World Bank, *System of National Accounts 1993* (Brussels/Luxembourg, New York, Paris, and Washington, 1993); International Monetary Fund, *Balance of Payments Manual, Fifth Edition* (Washington, 1993); International Monetary Fund, *Monetary and Financial Statistics Manual* (Washington, 2000); and International Monetary Fund, *Government Finance Statistics Manual* (Washington, 2001).

³Charles Steindel, 1995, "Chain-Weighting: The New Approach to Measuring GDP," *Current Issues in Economics and Finance* (Federal Reserve Bank of New York), Vol. 1 (December).

The members of the European Union have adopted a harmonized system for the compilation of national accounts, referred to as ESA 1995. All national accounts data from 1995 onward are presented on the basis of the new system. Revision by national authorities of data prior to 1995 to conform to the new system has progressed, but has in some cases not been completed. In such cases, historical *World Economic Outlook* data have been carefully adjusted to avoid breaks in the series. Users of EU national accounts data prior to 1995 should nevertheless exercise caution until the revision of historical data by national statistical agencies has been fully completed. See Box 1.2, “Revisions in National Accounts Methodologies,” in the May 2000 *World Economic Outlook*.

Composite data for country groups in the *World Economic Outlook* are either sums or weighted averages of data for individual countries. Unless otherwise indicated, multiyear averages of growth rates are expressed as compound annual rates of change. Arithmetically weighted averages are used for all data except inflation and money growth for the other emerging market and developing countries group, for which geometric averages are used. The following conventions apply.

- Country group composites for exchange rates, interest rates, and the growth rates of monetary aggregates are weighted by GDP converted to U.S. dollars at market exchange rates (averaged over the preceding three years) as a share of group GDP.
- Composites for other data relating to the domestic economy, whether growth rates or ratios, are weighted by GDP valued at PPPs as a share of total world or group GDP.⁴
- Composites for data relating to the domestic economy for the euro area (12 member coun-

tries throughout the entire period unless otherwise noted) are aggregates of national source data using weights based on 1995 European currency unit (ECU) exchange rates.

- Composite unemployment rates and employment growth are weighted by labor force as a share of group labor force.
- Composites relating to the external economy are sums of individual country data after conversion to U.S. dollars at the average market exchange rates in the years indicated for balance of payments data and at end-of-year market exchange rates for debt denominated in currencies other than U.S. dollars. Composites of changes in foreign trade volumes and prices, however, are arithmetic averages of percentage changes for individual countries weighted by the U.S. dollar value of exports or imports as a share of total world or group exports or imports (in the preceding year).

For central and eastern European countries, external transactions in nonconvertible currencies (through 1990) are converted to U.S. dollars at the implicit U.S. dollar/ruble conversion rates obtained from each country’s national currency exchange rate for the U.S. dollar and for the ruble.

Classification of Countries

Summary of the Country Classification

The country classification in the *World Economic Outlook* divides the world into two major groups: advanced economies, and other emerging market and developing countries.⁵ Rather than being based on strict criteria, economic or otherwise, this classification has

⁴See Box A2 of the April 2004 *World Economic Outlook* for a summary of the revised PPP-based weights and Annex IV of the May 1993 *World Economic Outlook*. See also Anne-Marie Gulde and Marianne Schulze-Ghattas, “Purchasing Power Parity Based Weights for the *World Economic Outlook*,” in *Staff Studies for the World Economic Outlook* (International Monetary Fund, December 1993), pp. 106–23.

⁵As used here, the term “country” does not in all cases refer to a territorial entity that is a state as understood by international law and practice. It also covers some territorial entities that are not states, but for which statistical data are maintained on a separate and independent basis.

Table A. Classification by World Economic Outlook Groups and Their Shares in Aggregate GDP, Exports of Goods and Services, and Population, 2004¹
(Percent of total for group or world)

	Number of Countries	GDP		Exports of Goods and Services		Population	
		Advanced economies	World	Advanced economies	World	Advanced economies	World

Middle East and North Africa	20	8.2	3.7	15.8	4.5	6.8	5.8

¹The GDP shares are based on the purchasing-power-parity (PPP) valuation of country GDPs. The number of countries comprising each group reflects those for which data are included in the group aggregates.

²Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

Table B. Advanced Economies by Subgroup

Major Currency Areas	Other Subgroups					
	Euro area		Newly industrialized Asian economies	Major advanced economies	Other advanced economies	
United States	Austria	Ireland	Hong Kong SAR ¹	Canada	Australia	Korea

Japan	Finland	Luxembourg	Singapore	Germany	Denmark	Norway
	France	Netherlands	Taiwan Province of China	Italy	Hong Kong SAR ¹	Singapore
	Germany	Portugal		Japan	Iceland	Sweden
	Greece	Spain		United Kingdom	Israel	Switzerland
				United States		Taiwan Province of China

¹On July 1, 1997, Hong Kong was returned to the People's Republic of China and became a Special Administrative Region of China.

evolved over time with the objective of facilitating analysis by providing a reasonably meaningful organization of data. A few countries are presently not included in these groups, either because they are not IMF members and their economies are not monitored by the IMF, or because databases have not yet been fully developed. Because of data limitations, group composites do not reflect the following countries: the Islamic Republic of Afghanistan, Bosnia and Herzegovina, Brunei Darussalam, Eritrea, Liberia, Serbia and Montenegro, Somalia, and Timor-Leste. Cuba and the Democratic People's Republic of Korea are examples of countries that are not IMF members, whereas San Marino, among the advanced economies, and Aruba, among the developing countries, are examples of economies for which databases have not been completed.

Each of the two main country groups is further divided into a number of subgroups. Among the advanced economies, the 7 largest in terms of GDP, collectively referred to as the major advanced countries, are distinguished as a subgroup, and so are the 12 members of the euro area and the 4 newly industrialized Asian economies. The other emerging market and developing countries are classified by region, as well as into a number of analytical groups. Table A provides an overview of these standard groups in the *World Economic Outlook*, showing the number of countries in each group and the average 2004 shares of groups in aggregate PPP-valued

GDP, total exports of goods and services, and population.

General Features and Composition of Groups in the *World Economic Outlook* Classification

Advanced Economies

The 29 advanced economies are listed in Table B. The seven largest in terms of GDP—the United States, Japan, Germany, France, Italy, the United Kingdom, and Canada—constitute the subgroup of *major advanced economies*, often referred to as the Group of Seven (G-7) countries. The euro area (12 countries) and the *newly industrialized Asian economies* are also distinguished as subgroups. Composite data shown in the tables for the euro area cover the current members for all years, even though the membership has increased over time.

In 1991 and subsequent years, data for *Germany* refer to west Germany *and* the eastern Länder (i.e., the former German Democratic Republic). Before 1991, economic data are not available on a unified basis or in a consistent manner. Hence, in tables featuring data expressed as annual percent change, these apply to west Germany in years up to and including 1991, but to unified Germany from 1992 onward. In general, data on national accounts and domestic economic and financial activity through 1990 cover west Germany only, whereas data for the central government and balance of

Table C. European Union

Estonia	Italy	Poland	United Kingdom
Finland			

payments apply to west Germany through June 1990 and to unified Germany thereafter.

Table C lists the member countries of the European Union, not all of which are classified as advanced economies in the *World Economic Outlook*.

Other Emerging Market and Developing Countries

The group of other emerging market and developing countries (146 countries) includes all countries that are not classified as advanced economies.

The *regional breakdowns* of other emerging market and developing countries—*Africa, central and eastern Europe, Commonwealth of Independent States, developing Asia, Middle East, and Western Hemisphere*—largely conform to the regional breakdowns in the IMF's *International Financial Statistics*. In both classifications, Egypt and the Libyan Arab Jamahiriya are included in the *Middle East* region rather than in Africa. In addition, the *World Economic Outlook* sometimes refers to the regional group of Middle East and North Africa countries, also referred to as the MENA countries, whose composition straddles the Africa and Middle East regions. This group is defined as the Arab League countries plus the Islamic Republic of Iran (see Table D).

Table D. Middle East and North Africa Countries

Algeria	Iraq	Mauritania	Sudan
Bahrain	Jordan	Morocco	Syrian Arab Republic
Djibouti	Kuwait	Oman	Tunisia
Egypt	Lebanon	Qatar	United Arab Emirates
Iran, I.R. of	Libya	Saudi Arabia	Yemen

Table E. Other Emerging Market and Developing Countries by Region and Main Source of Export Earnings

	Fuel	Nonfuel, of Which Primary Products
Africa	Algeria Angola Congo, Rep. of Equatorial Guinea Gabon Nigeria	Botswana Burkina Faso Burundi Chad Congo, Dem. Rep. of Côte d'Ivoire Ghana Guinea Guinea-Bissau Malawi Mauritania Namibia Niger Sierra Leone Uganda Zambia Zimbabwe
Commonwealth of Independent States	Azerbaijan Turkmenistan	Tajikistan Uzbekistan
Developing Asia		Papua New Guinea Solomon Islands
Middle East	Iran, I.R. of Iraq Kuwait Libya Oman Qatar Saudi Arabia Syrian Arab Republic Yemen	
Western Hemisphere	Venezuela	Chile Suriname

Other emerging market and developing countries are also classified according to *analytical criteria*. The analytical criteria reflect countries' composition of export earnings and other income from abroad, exchange rate arrangements, a distinction between net creditor and net debtor countries, and, for the net debtor countries, financial criteria based on external financing source and experience with external debt servicing. The detailed composition of other emerging market and developing countries in the regional and analytical groups is shown in Tables E and F.

¹Dot instead of star indicates that the net debtor's main external finance source is official financing.

²Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

The analytical criterion, by *source of export earnings*, distinguishes between categories: *fuel* (Standard International Trade Classification—SITC 3) and *nonfuel* and then focuses on *nonfuel primary products* (SITC 0, 1, 2, 4, and 68).

The financial criteria focus on *net creditor countries*, *net debtor countries*, and *heavily indebted poor countries (HIPC)*s. Net debtor countries are further differentiated on the basis of two additional financial criteria: by *official external financing* and by *experience with debt servicing*.⁶ The HIPC group

⁶During 1999–2003, 56 countries incurred external payments arrears or entered into official or commercial bank

comprises the countries considered by the IMF and the World Bank for their debt initiative, known as the HIPC Initiative, with the aim of reducing the external debt burdens of all the eligible HIPC countries to a “sustainable” level in a reasonably short period of time.⁷

debt-rescheduling agreements. This group of countries is referred to as *countries with arrears and/or rescheduling during 1999–2003*.

⁷See David Andrews, Anthony R. Boote, Syed S. Rizavi, and Sukwinder Singh, *Debt Relief for Low-Income Countries: The Enhanced HIPC Initiative*, IMF Pamphlet Series, No. 51 (Washington: International Monetary Fund, November 1999).

¹For many countries, figures for recent years are IMF staff estimates. Data for some countries are for fiscal years.

²The percent changes in 2002 are calculated over a period of 18 months, reflecting a change in the fiscal year cycle (from July–June to January–December).

³Data for some countries refer to real net material product (NMP) or are estimates based on NMP. For many countries, figures for recent years are IMF staff estimates. The figures should be interpreted only as indicative of broad orders of magnitude because reliable, comparable data are not generally available. In particular, the growth of output of new private enterprises of the informal economy is not fully reflected in the recent figures.

⁴Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

¹In accordance with standard practice in the *World Economic Outlook*, movements in consumer prices are indicated as annual averages rather than as December/December changes, as is the practice in some countries. For many countries, figures for recent years are IMF staff estimates. Data for some countries are for fiscal years.

²The percent changes in 2002 are calculated over a period of 18 months, reflecting a change in the fiscal year cycle (from July–June to January–December).

³For many countries, inflation for the earlier years is measured on the basis of a retail price index. Consumer price indices with a broader and more up-to-date coverage are typically used for more recent years.

⁴Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

⁵Data refer to fiscal years.

¹Percent of GDP.

²In this table, "other advanced economies" means advanced economies excluding the United States, euro area countries, and Japan.

³Percent of potential GDP.

⁴M2, defined as M1 plus quasi-money, except for Japan, for which the data are based on M2 plus certificates of deposit (CDs). Quasi-money is essentially private term deposits and other notice deposits. The United States also includes money market mutual fund balances, money market deposit accounts, overnight repurchase agreements, and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks. For the euro area, M3 is composed of M2 plus marketable instruments held by euro-area residents, which comprise repurchase agreements, money market fund shares/units, money market paper, and debt securities up to two years.

⁵Annual data are period average. For the United States, three-month treasury bills; for Japan, three-month certificates of deposit; for the euro area, the three-month EURIBOR; and for LIBOR, London interbank offered rate on six-month U.S. dollar deposits.

¹On a national income accounts basis except as indicated in footnotes. See Box A1 for a summary of the policy assumptions underlying the projections.

²Adjusted for valuation changes of the foreign exchange stabilization fund.

³Based on ESA95 methodology, according to which swap income is not included.

⁴Data include the impact of discharging future pension liabilities of the formerly state-owned telecommunications company at a cost of 1.8 percent of GDP in 1999.

⁵Data cover the consolidated central government including the social security funds but excluding privatization.

⁶Cash basis, underlying balance.

⁷Government balance is revenue minus expenditure plus balance of state-owned enterprises, excluding privatization receipts.

⁸Data are on a budget basis.

⁹Data are on an administrative basis and exclude social security transactions.

¹⁰Data are on a national income basis and exclude social security transactions.

¹On a national income accounts basis. The structural budget position is defined as the actual budget deficit (or surplus) less the effects of cyclical deviations of output from potential output. Because of the margin of uncertainty that attaches to estimates of cyclical gaps and to tax and expenditure elasticities with respect to national income, indicators of structural budget positions should be interpreted as broad orders of magnitude. Moreover, it is important to note that changes in structural budget balances are not necessarily attributable to policy changes but may reflect the built-in momentum of existing expenditure programs. In the period beyond that for which specific consolidation programs exist, it is assumed that the structural deficit remains unchanged.

²Excludes one-off receipts from the sale of mobile telephone licenses equivalent to 2.5 percent of GDP in 2000 for Germany, 0.1 percent of GDP in 2001 and 2002 for France, 1.2 percent of GDP in 2000 for Italy, 2.4 percent of GDP in 2000 for the United Kingdom, 0.1 percent of GDP in 2000 for Spain, 0.7 percent of GDP in 2000 for the Netherlands, 0.2 percent of GDP in 2001 for Belgium, 0.4 percent of GDP in 2000 for Austria, 0.3 percent of GDP in 2000 for Portugal, and 0.2 percent of GDP in 2002 for Ireland. Also excludes one-off receipts from sizable asset transactions, in particular 0.5 percent of GDP for France in 2005.

³Excludes Luxembourg.

⁴Excludes commonwealth government privatization receipts.

⁵Excludes oil.

⁶Government balance is revenue minus expenditure plus balance of state-owned enterprises, excluding privatization receipts.

¹End-of-period based on monthly data.

²M1 except for the United Kingdom, where M0 is used here as a measure of narrow money; it comprises notes in circulation plus bankers' operational deposits. M1 is generally currency in circulation plus private demand deposits. In addition, the United States includes traveler's checks of nonbank issues and other checkable deposits and excludes private sector float and demand deposits of banks. Canada excludes private sector float.

³Excludes Greece prior to 2001.

⁴Average of Wednesdays.

⁵M2, defined as M1 plus quasi-money, except for Japan, and the United Kingdom, for which the data are based on M2 plus certificates of deposit (CDs), and M4, respectively. Quasi-money is essentially private term deposits and other notice deposits. The United States also includes money market mutual fund balances, money market deposit accounts, overnight repurchase agreements, and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks. For the United Kingdom, M4 is composed of non-interest-bearing M1, private sector interest-bearing sterling sight bank deposits, private sector sterling time bank deposits, private sector holdings of sterling bank CDs, private sector holdings of building society shares and deposits, and sterling CDs less building society of banks deposits and bank CDs and notes and coins. For the euro area, M3 is composed of M2 plus marketable instruments held by euro-area residents, which comprise repurchase agreements, money market fund shares/units, money market paper, and debt securities up to two years.

¹Annual data are end of period. For the United States, federal funds rate; for Japan, overnight call rate; for the euro area, main refinancing rate; for the United Kingdom, base lending rate; and for Canada, target rate for overnight money market financing.

²Annual data are period average. For the United States, three-month treasury bill market bid yield at constant maturity; for Japan, three-month bond yield with repurchase agreement; for the euro area, three-month EURIBOR; for the United Kingdom, three-month interbank offered rate; for the Canada, three-month treasury bill yield.

³Annual data are period average. For the United States, 10-year treasury bond yield at constant maturity; for Japan, 10-year government bond yield; for the euro area, a weighted average of national 10-year government bond yields through 1998 and 10-year euro bond yield thereafter; for the United Kingdom, 10-year government bond yield; and for Canada, 10-year government bond yield.

¹Defined as the ratio, in common currency, of the normalized unit labor costs in the manufacturing sector to the weighted average of those of its industrial country trading partners, using 1999–2001 trade weights.

²In nominal effective terms. Average May 6, 2005–June 3, 2005 rates compared with July 8, 2005–August 5, 2005 rates.

³A synthetic euro for the period prior to January 1, 1999 is used in the calculation of real effective exchange rates for the euro. See Box 5.5 in the *World Economic Outlook*, October 1998.

¹Reflects errors, omissions, and asymmetries in balance of payments statistics on current account, as well as the exclusion of data for international organizations and a limited number of countries. Calculated as the sum of the balance of individual euro area countries. See "Classification of Countries" in the introduction to this Statistical Appendix.

²In this table, "other advanced economies" means advanced economies excluding the United States, euro area countries, and Japan.

³Excludes China, Malaysia, the Philippines, and Thailand.

⁴Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

¹Standard presentation in accordance with the 5th edition of the International Monetary Fund's *Balance of Payments Manual* (1993).

²Comprises capital transfers—including debt forgiveness—and acquisition/disposal of nonproduced, nonfinancial assets.

³Comprise net direct investment, net portfolio investment, and other long- and short-term net investment flows, including official and private borrowing. In the standard balance of payments presentation above, total net capital flows are equal to the balance on financial account minus the change in reserve assets.

⁴Because of limitations on the data coverage for net official flows, the residually derived data for net private flows may include some official flows.

⁵As defined in the *World Economic Outlook* (see footnote 6). It should be noted that there is no generally accepted standard definition of external financing.

⁶Defined as the sum of—with opposite sign—the goods and services balance, net income and current transfers, direct investment abroad, the change in reserve assets, the net acquisition of other assets (such as recorded private portfolio assets, export credit, and the collateral for debt-reduction operations), and the net errors and omissions. Thus, net external financing, according to the definition adopted in the *World Economic Outlook*, measures the total amount required to finance the current account, direct investment outflows, net reserve transactions (often at the discretion of the monetary authorities), the net acquisition of nonreserve external assets, and the net transactions underlying the errors and omissions (not infrequently reflecting capital flight).

⁷Including other transactions on capital account.

⁸Debt-creating foreign direct investment liabilities are not included.

⁹Net disbursement of long- and short-term credits, including exceptional financing, by both official and private creditors.

¹⁰Changes in liabilities.

¹¹Comprise use of IMF resources under the General Resources Account, Trust Fund, and Poverty Reduction and Growth Facility (PRGF). For further detail, see Table 36.

¹²This is often referred to as the "resource balance" and, with opposite sign, the "net resource transfer."

¹³Net external financing plus amortization due on external debt.

¹⁴Net external borrowing plus amortization due on external debt.

¹In this table, official holdings of gold are valued at SDR 35 an ounce. This convention results in a marked underestimate of reserves for countries that have substantial gold holdings.

²Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

³Reserves at year-end in percent of imports of goods and services for the year indicated.

¹Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

²Debt-service payments refer to actual payments of interest on total debt plus actual amortization payments on long-term debt. The projections incorporate the impact of exceptional financing items.

³Total debt at year-end in percent of exports of goods and services in year indicated.

¹Excludes service payments to the International Monetary Fund.

²Interest payments on total debt and amortization on long-term debt. Estimates through 2004 reflect debt-service payments actually made. The estimates for 2005 and 2006 take into account projected exceptional financing items, including accumulation of arrears and rescheduling agreements. In some cases, amortization on account of debt-reduction operations is included.

³Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

Note: The estimates in this table are based on individual countries' national accounts and balance of payments statistics. Country group composites are calculated as the sum of the U.S. dollar values for the relevant individual countries. This differs from the calculations in the April 2005 and earlier *World Economic Outlooks*, where the composites were weighted by GDP valued at purchasing power parities (PPPs) as a share of total world GDP. For many countries, the estimates of national saving are built up from national accounts data on gross domestic investment and from balance-of-payments-based data on net foreign investment. The latter, which is equivalent to the current account balance, comprises three components: current transfers, net factor income, and the resource balance. The mixing of data source, which is dictated by availability, implies that the estimates for national saving that are derived incorporate the statistical discrepancies. Furthermore, error omissions and asymmetries in balance of payments statistics affect the estimates for net lending; at the global level, net lending, which in theory would be zero, equals the world current account discrepancy. Notwithstanding these statistical shortcomings, flow of funds estimates, such as those presented in this tables, provide a useful framework for analyzing development in saving and investment, both over time and across regions and countries.

¹Calculated from the data of individual euro area countries.

²Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.

¹Data refer to trade in goods and services.²Mongolia, which is not a member of the Commonwealth of Independent States, is included in this group for reasons of geography and similarities in economic structure.³Interest payments on total debt plus amortization payments on long-term debt only. Projections incorporate the impact of exceptional financing items. Excludes service payments to the International Monetary Fund.
